

SHUT OFF DAMPER

RKE

The industrial dampers type RKE are designed to shut-off HVAC ductworks.
The RKE range is suitable for large-sized ventilation networks
(up to 2 000 x 2 000 mm).

CHARACTERISTICS

		RKE
Upstream/downstream airtightness according to EN 1751		Class 3
Frame airtightness according to EN 1751		Class A Option : Class C
Frame	Material	Galvanized steel Option : stainless steel AISI 304 L or 316 L
	Thickness	3 mm
	Depth	210 mm
	Flange	40 mm Option : flange according to ISO 15138
	Drilling	Ø10 in angles Option : drilling according to ISO 15138 - Special drilling on request
Blades	Material	Galvanized steel Option : stainless steel AISI 304 L or 316 L
	Thickness	2 x 1.5 mm
	Height	150 mm
	Bearings	Teflon bearings with zinc-plated steel cage Options : stainless steel cage, bronze bearings
	Shafts	zinc-plated steel Ø 15 mm Option : AISI 304L - 1.4307 or AISI 316L - 1.4404 stainless steel
Seals		EPDM seal on blades and frame Option : silicone seals for resistance up to 200 ° C
Linkage		Opposed blade operation in zinc-plated steel Option : stainless steel AISI 304 L or 316 L
Control		Manual : smooth shaft Ø16 - lever and locking device Suitable for actuator : smooth shaft Ø16 - lenght 130 mm Special adaptation according to the actuator
Dimensions		Width W from 400 to 2 000 mm with a 50 mm pitch Height H from 400 to 2 000 mm with a 50 mm pitch Circular adaptation from Ø100 to Ø1250 mm

SHUT OFF DAMPER

RKE

MECHANICAL RESISTANCE

PRESSURE LOSS

Pressure loss (Pa) according to air velocity (m/s) and blades' opening angle (°). Damper ducted upstream and downstream.
0° = damper fully open
